

Antibacterial Film

TFS antibacterial film is ideal for use in the food and agricultural industries. Suitable for use on a wide range of substrates, the film is ideal for wall, floor and ceiling construction. The film complies with European food contact regulations, has antimicrobial properties to continuously inhibit the growth of bacteria, mildew and fungi and is independently certified for its performance.

Tough polymer construction makes the antibacterial film abrasion and scratch resistant, withstanding everyday wear and tear. As a result it may be used in clean rooms, medical packaging facilities, healthcare environments and food & beverage development areas. It is also highly suitable for the lining of packing cases and storage boxes for food products.

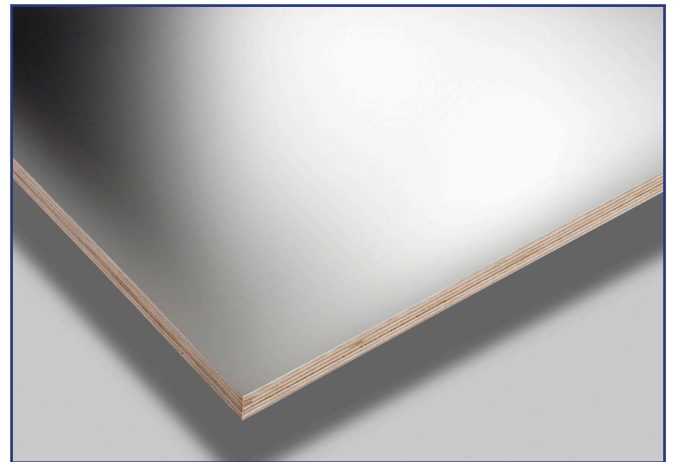

Key Product Features

- ✓ Durable tear resistant film
- ✓ Rot and mould proof
- ✓ Can be subjected to regular pressure washing
- ✓ Complies with European food contact regulations
- ✓ Contains no known hazardous substances
- ✓ Reflects more than 96% of radiated energy
- ✓ Virtually zero vapour transmission
- ✓ Excellent light reflective properties can reduce lighting energy costs
- ✓ Complementary anti-bac tape for all joints
- ✓ Suitable for use on a range of substrates

Antibacterial Film

Typical Applications

- ✓ Agricultural Buildings
- ✓ Food Factories
- ✓ Packing Cases
- ✓ Food Storage Units

Market Sectors

Agriculture

Mobile &
Modular Buildings
