

Class 0 Foils

Class 0 foil products deliver a major contribution towards fire safety in commercial and residential buildings. TFS offer fire retardant foils that are factory bonded to a range of substrates to achieve BS 476 Class 0 certification, including particleboard, plywood and MDF.

Performance is fully supported by independent fire certification carried out by Exova Warringtonfire.

The range includes permanently bonded Class 0 silver and white foil and can also be combined with TFS slip resistant and decorative coatings to the top surface, particularly in mezzanine floor applications. TFS also supply self adhesive Class 0 tape for a complete system solution. Whether your application is mezzanine flooring, internal panels for portable buildings or specialist construction, pre-bonded Class 0 foil delivers high performance and peace of mind.

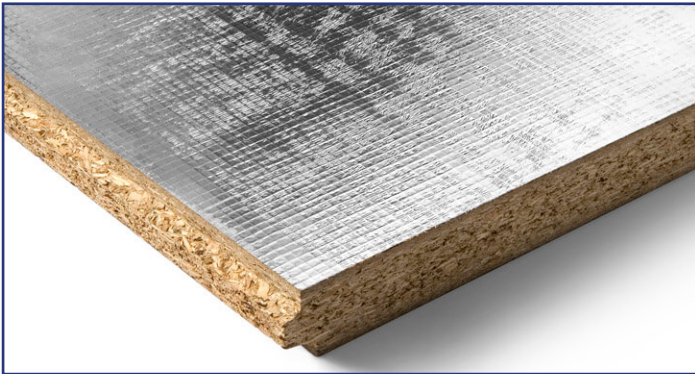

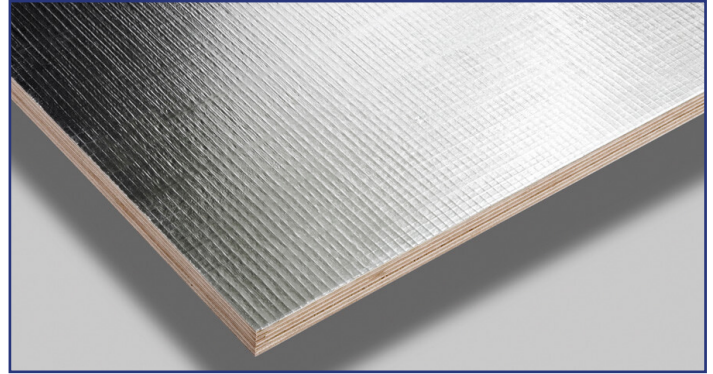

Key Product Features

- ✓ Permanent bond Silver and White class 0 Foil
- ✓ Certified performance on a range of substrates including Particleboard, Plywood and MDF
- ✓ System solution includes the availability of self-adhesive Class 0 tape
- ✓ Panels can be supplied with foil to bottom surface and pre-decorated or slip resistant coating to top surface
