

Machining Services

To complement project specific coatings and films, TFS also offer a complete range of machining services, including cut to size, tongue and grooving, routing and sanding. This comprehensive machining and profiling service saves you time and money on site by offering site ready fabrication.

The services include the routing of sheet materials and composite panels. No mess or wasted time on site and minimal material waste. TFS utilise the very latest machining equipment. Materials that can be fabricated include MDF, Oriented Strand Board (OSB), particleboard, plywood and cementitious boards.

Whatever the application, the result is factory quality machined finishes ready for immediate use when delivered to site. Using our machining services can eliminate delays in the construction process, particularly for industrial flooring.

Face routing and grooving, or panel edge machining can be combined with other TFS services. Cut to size offers even more factory fabrication options. Machining of substrates with factory applied coatings or films further enhances the TFS "one-stop-shop" concept. Materials arrive on site ready to use and in pristine condition. This saves considerable time and money, eliminating re-works and wastage.

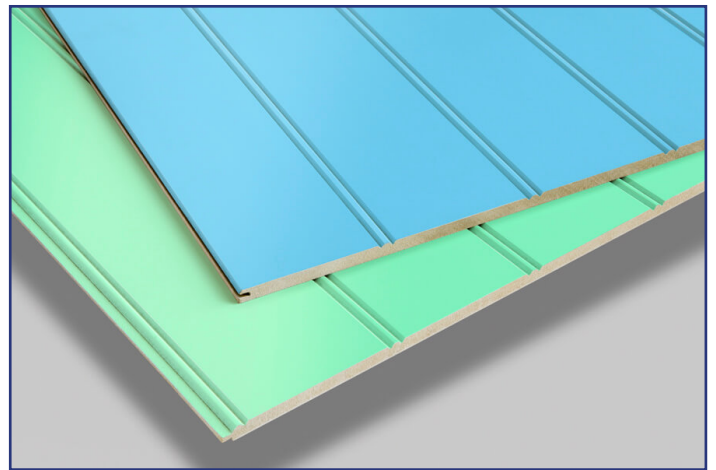

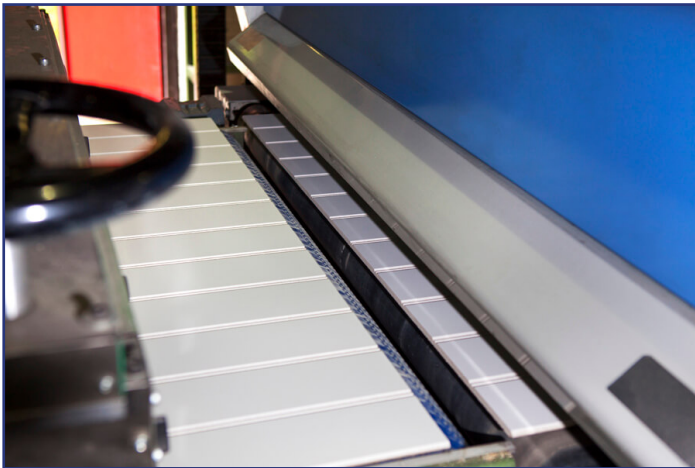

Key Product Features

- ✓ Saves time and money on site
- ✓ Face routing and grooving
- ✓ Precision panel edge machining
- ✓ One-stop-shop service
- ✓ Bespoke fabrication tailored to your project

Machining Services

Typical Applications

- ✓ Mezzanine Systems
- ✓ Industrial Flooring
- ✓ Decorative Wall Panels
- ✓ Retail Flooring
