

Pre-Finished Hoardings

Creating a corporate, secure construction site perimeter is now more cost effective and sustainable thanks to TFS pre-finished hoardings. They offer significant advantages over traditional construction site installations where posts, rails and panels have to be painted in situ. Under coats and top coats require time to dry properly to be effective. This takes valuable labour and drying time, which can be extended by bad weather. Additionally panel edges are often not coated, which can compromise the panel integrity.

TFS pre-finished hoardings save both time and money. Client choice of substrate – usually plywood or OSB – is subject to quality controlled factory application, which delivers a superior and consistent coating complying with the coating manufacturer's specification. All edges are coated to ensure a long life and optimum durability. Once delivered to site only fitting is required, so installation is rapid. Pre-finished hoardings are ideal for use with on ground clamping systems. This makes them 100% reusable.

Key Product Features

- ✓ Ready to fit and use immediately
- ✓ Saves valuable labour time and money on site
- ✓ Superior finish and appearance
- ✓ Factory controlled coatings for added durability
- ✓ Environmentally friendly non-solvent coatings
- ✓ 100% reusable for multiple projects
- ✓ Full refurbishment service available
- ✓ Available in any RAL colour or to client specification

Pre-Finished Hoardings

Typical Applications

- ✓ Exterior Site Protection
- ✓ Interior Screens
- ✓ Crowd Control
- ✓ Temporary Public Walkways
- ✓ Building Extensions & Renovations
