

# Thermal Insulated Panels

Pre-bonded thermal insulated panels are the perfect time saving solution to compliance with the Building Regulations Part L. TFS offer a bonding service to reduce on site labour, saving both time and money, using a wide variety of factory bonded rigid insulation materials.

The combination ensures consistent thermal performance throughout the building and saves on labour time, by reducing the number of installation operations. This greatly speeds up the construction process, saving valuable time and reducing costs.

Pre-bonded thermal insulation panels are easy to cut and install. They can also be provided with tongue and groove machined finish edges where required.

The wide variety of options means that panels can be fabricated for a vast array of projects. Thanks to TFS's flexible manufacturing process, factory bonded panels can be fabricated in small or large quantity batches using your choice of insulation, including PIR, PUR or phenolic foam boards, extruded or expanded polystyrene (XPS/ EPS) or rock fibre insulation.

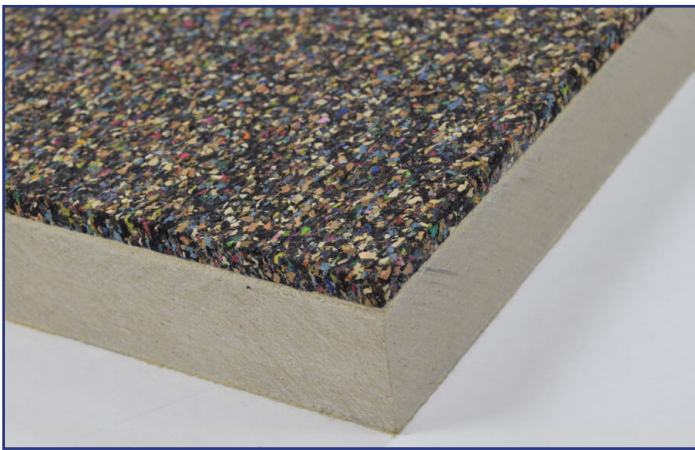

## Key Product Features

- ✓ High quality factory bonding for consistent performance
- ✓ Substrates include plasterboard, exterior grade building boards, Class o building boards, plywood and particleboard
- ✓ Client choice of insulation thickness and type to suit the application
- ✓ Available in small or large quantities

# Thermal Insulated Panels

## Typical Applications

- ✓ Insulated Floor Systems
- ✓ Insulated Loft Panels
- ✓ Insulated Roof Decking
- ✓ Soffit Liner Boards
- ✓ Insulated Wall Panels

## Market Sectors

Agriculture

Construction

DIY

Housing
